

**Why were the changes made?**

- ✓ **Provides** additional safety features to the consumer.
- ✓ **Reduces** installation time and cost.
- ✓ **Utilizes** sealed combustion, ideal for newer homes and increases efficiency.
- ✓ **Reflects** the latest improvements in technology.

**What are the changes?**

New Components:

1. Bypass timer – bypasses the pressure switch for ten (10) seconds, this allows the burner to light on without activating the pressure switch, avoiding unnecessary lock outs.
2. Pressure switch – Senses a blocked vent condition.
3. Burner sleeve – Factory installed to properly locate the combustion air tube, no field installation or adjustment is required.

**Changes in Installation:**

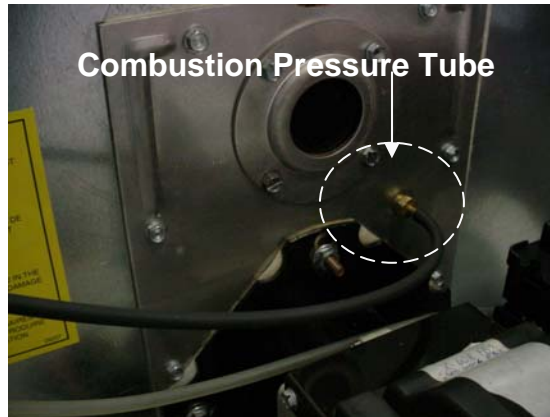

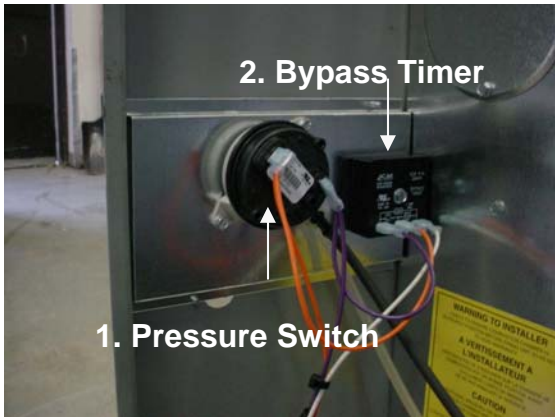

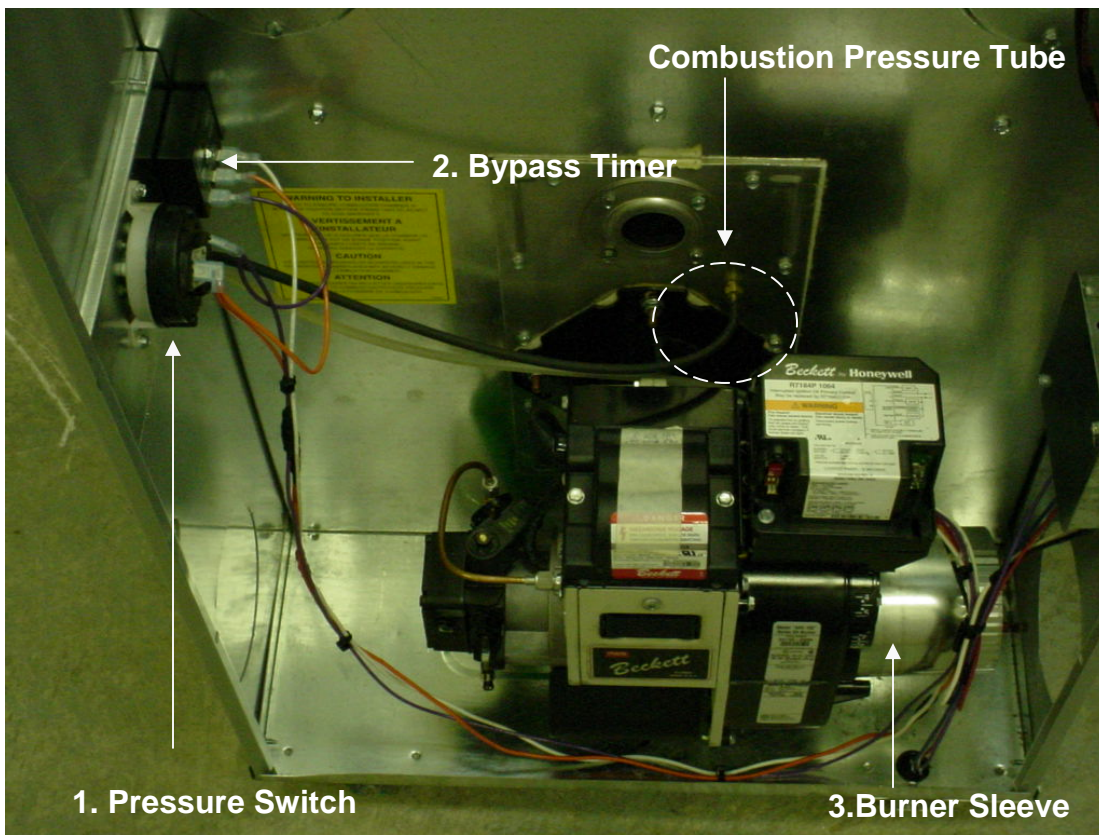

- ✓ Vacuum relief valve (VRV) is no longer required.
- ✓ Make-up air venting in closet and alcove installations is no longer required.

**What are the advantages?**

- ✓ The burner will shut down if the flue vent becomes blocked making the appliance safer.
- ✓ The burner will shut down if the combustion air vent becomes blocked, reducing sooting.
- ✓ The Vacuum Relief Valve (VRV) is no longer required.
- ✓ Make-up combustion air is no longer required reducing labor and material costs for closet and alcove installations.
- ✓ Ideal for newer homes with airtight construction.
- ✓ Sealed combustion technology increases overall efficiency.

**New Models Available (Replaces existing Direct Sidewall Vent units)**
